

Izzan Fakhril Islam

SOFTWARE DEVELOPMENT ENGINEER IN TEST · QUALITY ASSURANCE ENGINEER

East Jakarta, Indonesia

☎ (+62) 896-6751-5857 | ✉ izzanfi@hotmail.com | 📱 izznfkhrislam | 🌐 izznfkhrislam

Summary

Indonesia-based Software Development Engineer in Test and QA Engineer, specialized on API automation testing platform and Performance Testing maintenance. Experienced at working on numerous types of businesses, e.g. E-Commerce, Warehouse Management and Fulfillment, and Supply Chain SaaS. Loves to work in a dynamic, cross-country team, and contribute to the organization by maintaining software quality and keeping developers' productivity at pace by building tools to enhance it.

Skills

Quality Assurance Tools	Katalon Studio, Selenium, Appium, Cucumber, Serenity BDD, Rest Assured, XCUITest, Locust
Development Tools	Django REST, Maven, Flutter, Spring Boot, Logging Tools (Elasticsearch, Logstash, Kibana), Apache Kafka, Redis, Docker, Git, Jenkins, Gitlab CI, UNIX systems
Database Systems	PostgreSQL, MySQL, MongoDB
Programming Languages	Java, Python, Go, Dart
Project Management Tools	JIRA, Confluence, Microsoft Office Suite (Outlook, Excel, PowerPoint), Google Suite (Sheets, Slides, Gmail), Trello

Education

University of Indonesia

BACHELOR'S DEGREE, COMPUTER SCIENCE (FACULTY OF COMPUTER SCIENCE)

Depok, West Java

Aug. 2016 - Aug. 2020

- Awarded **2019 KEB Hana Bank Scholarship** for selected STEM faculty students.
- Led **RISTEK Fasikom UI**, the faculty's tech research and development student organization, on Mobile Development Special Interest Group (SIG).
- Worked as the **Teaching Assistant** for Web Design & Programming (CSGE602022), Database (CSGE602070), and Android Development (CSCE604227) courses.

Work Experience

Blibli.com (PT. Global Digital Niaga)

Central Jakarta, Indonesia

SOFTWARE DEVELOPMENT ENGINEER IN TEST (SDET)

Jan. 2023 - Present

- Worked as the SDET on Warehouse Management System (WMS) squad.
- Handling the end-to-end testing process for every product development within the ownership of the squad, started by doing the business requirements analysis, joining the technical discussion with the software engineers, and deriving the related resources (business and technical side) into a comprehensive test case document that will be reviewed by the external stakeholders.
- Handling the API and UI automation side of the product development as the prerequisite of the production deployment, using Selenium Cucumber written in Java.
- Successfully maintained the success rate of daily automation (Sanity, Regression, End-to-End) at > 95%
- **Products covered:**
 - Warehouse Management System (Stockholm): Internal tools used by warehouse operations team, to do the order fulfillment on warehouse level, and do some stock control flows (e.g. transfer storage, stock opname, replenishment).
 - Order Management System (OMS): Middleware tools to handle incoming orders from Blibli Seller Center (for online B2C orders) and SAP (for offline B2B orders).
 - Blibli X-Fulfillment-Center: Middleware to provide warehouse data (e.g. operational hours, location, defect mapping) to other squads' services.
- **Projects handled:**
 - Pick List Generation Logic Improvement: Improving warehouse picker worker experience on doing the stock picking as the part of the order fulfillment process.
 - Warehouse Layout Service Implementation: Introducing automatic pick list assignment to a designated picker based on the picking zone and access rights, using PostgreSQL GIS library (PostGIS)
 - Warehouse Inventory Service Migration: Dedicated service creation to handle warehouse item stocks and its transactions.
 - Fresh by Blibli (Quick Commerce) Dark Store fulfillment center preparation from Warehouse Management system side by preparing the warehouse and configurations.
 - Warehouse item stock accuracy improvement on Stockholm to minimize stock discrepancy issues.
 - IMEI Correction feature: Reducing technical support ticket raised by operations team related to order with IMEI attribute items fulfillment process.
 - Multiple Pick-Up Point: Enhancing end user purchasing experience by dividing a single item into several warehouses that will be treated as an individual pickup point and determining the closest one to the shipment location.
 - Marunda Warehouse: Blibli's biggest warehouse located in Bekasi, West Java, to store items to be distributed to smaller warehouses (Mother Hub). Successfully done the integration between software and hardware (storage picking to conveyor belts, put-to-light system, automatic sorting based on logistics provider) and ensure the end-to-end flow of order fulfillment can be done successfully.

Rakamin Academy

North Jakarta, Indonesia

CLASS FACILITATOR

Mar. 2024

- Worked as the Class Facilitator for Rakamin Academy's client internal training, **IT Officer Development Program, Bank Negara Indonesia (BNI)**, located at BNI Corporate University, North Jakarta.
- Supervised directly by the Officer Development Program Head from BNI and Rakamin Academy's educators committee.
- Provided the learning materials, pre-test and post-test problem sets, homework tasks and its grading process, and source code made during the learning process for participants' reference.
- **Learning Materials covered:**
 - Back-End Development and Intro to Microservices Architecture using Java Spring Boot
 - Web Application Security using Spring Web Security
 - SQL Object-Relational Mapping to Java Spring, Database Security & System Design using PostgreSQL

Dibimbing.id

West Jakarta, Indonesia

CLASS FACILITATOR

Feb. 2023

- Worked as the Class Facilitator for Dibimbing.id's client internal training, **Optik Melawai IT Division**, located at Optik Melawai Employee Training Center, Grogol Petamburan, West Jakarta
- Supervised directly by the Head of IT Development from Optik Melawai and Dibimbing.id's educators committee.
- Provided the learning materials, pre-test and post-test problem sets, and source code made during the learning process for participants' reference.
- **Learning Materials covered:**
 - Intermediate SQL System using PostgreSQL
 - PostgreSQL database security design

Tokopedia (formerly GoTo Group)

South Jakarta, Indonesia

SOFTWARE ENGINEER - ENGINEERING PRODUCTIVITY

Jun. 2021 - Dec. 2022

- Worked as the Engineering Productivity on Promotion Platform squad.
- Handled the Desktop Web UI, Mobile Web UI, Android, iOS, and Back-End automation for Tokopedia's promotion-related pages (e.g. promotion list page, input promo, total price calculation after promo apply).
- Maintained the UI and Android automation using Katalon Studio written in Groovy, and iOS automation using XCUITest written in Swift.
- Maintained the load testing script of Tokopedia's promotion engine service, using Locust, written in Go.
- Conducted the load testing for Tokopedia's promotion engine service, and making sure that its metrics (e.g. minimum RPS for each endpoint) are kept on the track.
- Chosen as the PIC from Engineering Productivity for promotion engine service migration from Alibaba Cloud to GCP, ensured the performance of the services before, during, and after migration are intact, and achieved 0% downtime by conducting internal load testing and performance analysis with software engineers.
- Implemented Chaos Engineering practice on Tokopedia's promotion engine service along with the software engineers, using Toxiproxy, and analyzed the service's behaviors on downtime and timeout scenarios.
- **Projects handled:**
 - Bebas Ongkir (free shipping) benefit stacking with previously applied discount/vouchers.
 - Tokopedia product variant feature under one Product Detail Page (PDP), and personalized discount/vouchers available per variant.
 - Tokopedia NOW!, a quick-commerce product from Tokopedia for groceries and fresh goods to be delivered more quickly.
 - Tokopedia PLUS, a subscription service made by Tokopedia to give the subscribers more benefits in terms of discount/free shipping vouchers available.

Advotics (PT. Advotics Teknologi Global)

South Jakarta, Indonesia

SOFTWARE ENGINEER - BACK-END

Jul. 2020 - Jun. 2021

- Worked as the Back-End Engineer on Marketing and Engagement squad.
- Initiated message queueing system implementation using Apache Kafka on Advotics' monolith service, to minimize sequential data processing and making the API call faster.
- Built the Trade Promotion Analytics service from scratch, started from data warehouse database designing, ETL workers and cronjob installations on the server. This service provides ready-to-serve aggregate data to be exported to CSV or XLSX reports to be used by the client.
- Refactored Trade Claim Management module into its own Java Spring Boot service, making it more modular and easier to maintain.
- **Clients handled:** PT. Pertamina Lubricants, Saint-Gobain, Reckitt-Benckiser.
